RI TRANSPARENCY REPORT

2013/14

Rabo FARM

About this report

The PRI Reporting Framework is a key step in the journey towards building a common language and industry standard for reporting responsible investment (RI) activities. This RI Transparency Report is one of the key outputs of this Framework. Its primary objective is to enable signatory transparency on RI activities and facilitate dialogue between investors and their clients, beneficiaries and other stakeholders. A copy of this report will be publicly disclosed for all reporting signatories on the [PRI website](#), ensuring accountability of the PRI Initiative and its signatories.

This report is an export of the individual Signatory organisation's response to the PRI during the 2013-14 reporting cycle. It includes their responses to mandatory indicators, as well as responses to voluntary indicators the signatory has agreed to make public. The information is presented exactly as it was reported. Where an indicator offers a response option that is multiple-choice, all options that were available to the signatory to select are presented in this report. Presenting the information exactly as reported is a result of signatory feedback which suggested the PRI not summarise the information. As a result, the reports can be extensive. However, to help easily locate information, there is a **Principles index** which highlights where the information can be found and summarises the indicators that signatories complete and disclose.

Understanding the Principles Index

The Principles Index summarises the response status for the individual indicators and modules and shows how these relate to the six [Principles for Responsible Investment](#). It can be used by stakeholders as an 'at-a-glance' summary of reported information and to identify particular themes or areas of interest.

Indicators can refer to one or more Principles. Some indicators are not specific to any Principle. These are highlighted in the 'General' column. When multiple Principles are covered across numerous indicators, in order to avoid repetition, only the main Principle covered is highlighted. This results in some Principles not being explicitly highlighted. For instance, Principle 1 and 2 cannot be implemented without implementing Principle 3, but there are cases when Principle 3 is not explicitly highlighted.

All indicators within a module are presented below. The status of indicators is shown with the following symbols:

Symbol	Status
✓	The signatory has completed all mandatory parts of this indicator
☑	The signatory has completed some parts of this indicator
🔒	This indicator was not relevant for this signatory
-	The signatory did not complete any part of this indicator
⚠	The signatory has flagged this indicator for internal review

Within the table, indicators marked in blue are mandatory to complete. Indicators marked in grey are voluntary to complete.

The global population is expected to reach 9.6 billion by 2050. Alongside limited agricultural land, water security issues, infrastructure and biodiversity challenges coupled with climate change, we face an uncertain future for food security. Rabo Farm plays an active role in responding to the challenges facing global food security. Rabo Farm is an investment manager serving institutional investors in farms and agricultural production. Rabo Farm initiates, structures and manages funds that invest in farms and primary agricultural production. Rabo Farm's mission is to increase agricultural production by improving productivity and the efficiency of existing farms. Rabo Farm invests in closing the agricultural production gap between inefficient and efficient farms. We do this in a sustainable way by using less farm inputs per hectare of agricultural land, while producing more. Rabo Farm aims to generate positive returns for numerous stakeholders, ranging from farmers and investors to local communities.

The global population is expected to reach 9.6 billion by 2050. With less access to scarce land, water and mineral resources, the agricultural sector will need to double agricultural production in the next 40 years to meet the growing demand for food.

Rabo Farm plays an active role in responding to the challenges facing global food security. Rabo Farm's mission is to increase primary agricultural production by improving productivity and the efficiency of existing farms and rural regions in emerging countries. Based on our principles of adding real value, creating alignment and facilitating sustainable growth, our aim is to invest in bringing the agricultural production of a farm to its full potential. This will be done sustainably by using less farm inputs per hectare of agricultural land, while producing more.

Rabo Farm envisions to build up a portfolio of modern, efficient and sustainable farms that prosper in a vital local agricultural sector. Main elements of Rabo Farm's responsible investment policy are:

- sustainable farms and farmland
- ethical business practices
- promoting knowledge, education and sustainable innovation
- creating an enabling agricultural environment for leaseholders and other local farmers
